

IS-Projekt - Aufgabe3

Benjamin Daeumlich Lukas Moll Alexey Grachev

Humboldt-Universität zu Berlin

Institut für Informatik

13. Juni 2007

1 Aufgabe A2

2 Aufgabe A3

3 Aufgabe F2

Aufgabe A2

- Modellierung der Datenbank mittels Cayenne
- zusätzliche Klassen Organisation, Collection und Event modellieren

- Modeller von Cayenne benutzen
- Reengineer Database Schema
- dadurch werden die Tabellen automatisch modelliert
- zusätzliche Objekt-Entities anlegen mit Qualifier für die Modellierung von Event, Collection und Organisation
- speichern im WEB-INF-Verzeichnis des Kontextes
- dadurch Cayenne-Konfigurationsdateien automatisch erzeugt

The screenshot shows the CayenneModeller application window. The title bar reads "CayenneModeller - C:\Dokumente und Einstellungen\gravi\workspace\IsProject07\WebContent\WEB-INF\cayenn...". The menu bar includes "File", "Project", "Tools", and "Help". Below the menu is a toolbar with various icons for file operations and navigation. On the left, a tree view shows the project structure under "instged", with "instgedNode" selected. The main area displays the configuration for the "Main \ Adapter \" adapter. It is divided into two sections: "DataNode Configuration" and "JDBC Configuration".

DataNode Configuration

- DataNode Name:
- Local DataSource (opt): ...
- DataSource Factory:

JDBC Configuration

- JDBC Driver:
- DB URL:
- User Name:
- Password:
- Min Connections:
- Max Connections:

A "Sync with Local" button is located at the bottom right of the configuration area.

CayenneModeller - C:\Dokumente und Einstellungen\gravi\workspace\IsProject07\WebContent\WEB-INF\cayenn...

The screenshot shows the CayenneModeller application window. The title bar reads "CayenneModeller - C:\Dokumente und Einstellungen\gravi\workspace\IsProject07\WebContent\WEB-INF\cayenn...". The menu bar includes "File", "Project", "Tools", and "Help". The toolbar contains various icons for file operations and navigation. On the left, a tree view shows a project structure under "instged", including "instgedMap" (with sub-items: Collection, Document, Event, Folder, Folder2document, Organisation, document, folder, folder2document) and "instgedNode" (with sub-item: instgedMap). The "Folder" entity is selected. The main panel is titled "Entity \ Attributes \ Relationships \". Below this, there are icons for undo, redo, and refresh. The "ObjEntity Configuration" section contains the following fields:

- ObjEntity Name: Folder
- Inheritance: (empty dropdown)
- TableView: folder (with a "Sync w/DbEntity" button)
- Java Class: instged.cayenne.Folder
- Superclass: (empty text box)
- Qualifier: (empty text box)
- Read-Only:
- Optimistic Locking:

The screenshot shows the Cayenne-Modeller application window. The title bar reads "CayenneModeller - C:\Dokumente und Einstellungen\gravi\workspace\IsProject07\WebContent\WEB-INF\cayenn...". The menu bar includes "File", "Project", "Tools", and "Help". The toolbar contains various icons for file operations and navigation. On the left, a tree view shows the project structure under "instged", with "instgedMap" expanded to show "Collection" selected. The main panel is titled "Entity \ Attributes \ Relationships \". Below this, there are icons for undo, redo, and refresh. The "ObjEntity Configuration" section contains the following fields:

- ObjEntity Name: Collection
- Inheritance: Folder (selected in a dropdown)
- TableView: folder (selected in a dropdown) with a "Sync w/DbEntity" button
- Java Class: instged.cayenne.Collection
- Superclass: instged.cayenne.Folder
- Qualifier: folderType = "COLLECTION"
- Read-Only:
- Optimistic Locking:

Aufgabe A3

- Ausgabe der Tabelle mittels jsp unter Nutzung von Cayenne

- Klassen generieren über Cayenne-Modeller
- extra getter-Methoden für die Primary-Keys der Tabellen document und folder schreiben
- in der web.xml des Kontextes zusätzlichen Listener für Cayenne konfigurieren

```
<listener>  
  <listener-class>org.objectstyle.cayenne.conf.  
    WebApplicationContextProvider</listener-class>  
</listener>
```

- jsp-Dateien entsprechend anpassen

```
1 <%@ ... import="java.util.*, instgед.cayenne.*, org.
    objectstyle.cayenne.access.DataContext, org.
    objectstyle.cayenne.query.SelectQuery" %>
2 <!DOCTYPE ...><html><head>...</head><body>
3 <table>
4 <tr><td><b>folder_id</b></td>...</tr>
5 <%
6     DataContext dc = DataContext.getThreadDataContext
        ();
7     SelectQuery query = new SelectQuery(Document.
        class);
8     List<Document> doclist = dc.performQuery(query);
9     Iterator iterator = doclist.iterator();
10    while (iterator.hasNext()) {
11        Document elem = (Document)iterator.next();
12    %>
13    <tr><td><%= elem.getDocumentId() %></td>...</tr>
14    <% } %>
15 </table>
16 </body></html>
```

Aufgabe F2

- Lasttest mittels JMeter generieren
- dabei Last-Ziel und erzeugte Last variabel gestalten

- Variable Werte setzen über

```
${__property(<propertyname>, , <standardwert>)}
```

- Aufruf mit variablen Werten über

```
jmeter -J<property_name>=<property_value>
```

The screenshot shows the Apache JMeter GUI with the following details:

- Title Bar:** Instged.jmx (C:\Dokumente und Einstellungen\gravi\Eigene Dateien\Studium\Informationssysteme\Projekt\T...
- Menu Bar:** Datei, Bearbeiten, Start, Optionen, Hilfe
- Left Panel (Tree View):** Instged Test Plan, Instged, HTTP Request, Graph Results, WorkBench
- Main Panel (Thread Group Configuration):**
 - Thread Gruppe**
 - Name:** Instged
 - Action to be taken after a Sampler error:** Continue, Stop Thread, Stop Test
 - Thread Properties:**
 - Anzahl von Threads:** \${__property(threads,,2)}
 - Ramp-Up Period (in seconds):** \${__property(ramup,,1)}
 - Wiederholanzahl:** endlos Wiederholen, \${__property(retry,,10)}
 - Scheduler

The screenshot shows the Apache JMeter GUI with the following configuration for an HTTP Request:

- Name:** HTTP Request
- Web Server:**
 - Server Name oder IP: `${__property(serverip,,141.20.27.99)}`
 - Port Number: `${__property(port,,938)}`
- HTTP Request:**
 - Protokol: (empty)
 - Method: GET
 - Path: `${__property(path,,context04/folders.jsp)}`
 - Redirect Automatically
 - Folge Redirects
 - Benutze KeepAlive
- Parameter die mit dem Request gesendet werden:**

Name:	Wert	Encodieren?	Include Equ
- Buttons: **Hinzufügen**, **Löschen**
- Sende eine Datei mit dem Request:**
